

DBA Team Performance Tracking System

Executive Summary

This document describes the automated performance tracking system implemented for the DBA team at MTN Irancell. The system provides objective metrics for evaluating team productivity and attendance.

1. Background

The DBA team coordinates primarily through Discord. To address productivity monitoring needs and provide objective performance data, an automated tracking system was developed.

Objectives

- Track daily attendance (check-in/check-out times)
 - Monitor active work hours and break durations
 - Measure engagement through Discord activity
 - Generate automated reports for management review
-

2. System Components

2.1 Discord Activity Bot

A custom Discord bot monitors team activity in real-time:

Metric	Description
Idle Time	Minutes spent with Discord status “idle”
Offline Time	Minutes with Discord status “offline”
Voice Channel Time	Time spent in voice channels

The bot runs continuously (24/7) and records activity every minute.

2.2 Attendance Tracker

Parses Discord messages to extract:

- Check-in time (greetings: “salam”, “sobh bekheir”, etc.)
- Check-out time (farewells: “felan”, “khaste nabashid”, etc.)
- Break periods (BRB/back pairs)
- Leave requests (hourly and daily)

2.3 Email Report Generator

Sends formatted HTML reports with CSV attachments:

Report Type	Schedule	Recipients
Daily Report	19:00	DBA Management
Monthly Summary	24th of Jalali month	Finance/HR

3. Working Hours Policy

3.1 Flexible Hours

Parameter	Value
Entry Window	08:00 - 09:30
Exit Window	17:00 - 18:30
Working Days	Saturday - Wednesday
Total Work Hours	9 hours (including 1 hour lunch)

3.2 Break Rules

Break Type	Maximum Duration
Short Break (BRB)	30 minutes
Lunch Break	1 hour

If a break exceeds the allowed duration, it should be logged as hourly leave.

3.3 Voice Channel Requirement

Team members are expected to be available in Discord voice channels until 10:00 AM for coordination purposes.

4. Tracked Metrics

4.1 Daily Report Fields

Field	Description
Name	Team member name
Check-in	First activity time
Check-out	Last activity time
Work Hours	Duration between check-in and check-out minus breaks
BRB Time	Total break duration
Idle Minutes	Time with “idle” Discord status
Offline Minutes	Time with “offline” Discord status
Voice Minutes	Time in voice channels
Discord Messages	Number of messages sent (excluding greetings)

Field	Description
Email Count	Emails sent (from Outlook export)

4.2 Alert Conditions

The system flags the following conditions:

Condition	Threshold
Late Arrival	After 09:30
Early Departure	Before 17:00 (adjusted for entry time)
Extended BRB	Over 30 minutes
Low Work Hours	Under 8 hours
High Idle Time	Over 20% of work hours

Note: On-call personnel are excluded from attendance warnings.

5. Leave Management

5.1 Leave Types

Type	Format Example
Full Day	“morakhasi farda” or “morakhasi 25”
Date Range	“morakhasi az 25 ta 28”
Hourly Leave	“morakhasi az 14 ta 17”
Remote Work	“remote shiraz”

5.2 Leave Calculation

For partial day leave until end of work, the exit time is calculated as: **Exit Time = Entry Time + 9 hours**

Example: - Entry at 08:00 → Expected exit at 17:00 - Entry at 09:30 → Expected exit at 18:30

6. Report Distribution

6.1 Daily Reports

Sent at 19:00 containing: - Attendance summary for all team members - Warnings and alerts - On-call schedule reference

6.2 Monthly Aggregated Report

Generated on the 24th of each Jalali month for payroll reference: - Total work hours per person - Average daily hours - Leave summary - Activity metrics

7. Excluded Personnel

The following roles are excluded from standard tracking metrics:

Role	Reason
Team Lead	Different responsibilities
Senior Consultants	Variable schedules
On-Call (daily)	Special duty hours

8. Technical Implementation

8.1 Infrastructure

Component	Technology
Discord Bot	Python (discord.py)
Attendance Parser	Python
Email Sender	Python (exchangelib)
Data Storage	JSON files
Scheduler	Linux cron

8.2 Data Flow

Discord Messages → Export (18:55) → Parse → Generate Report → Email (19:00)
↓
Discord Bot (real-time) → Idle/Offline/Voice tracking → JSON database

8.3 Automation Schedule

Time	Task
18:55	Export Discord messages
19:00	Generate and send daily report
10:00 (24th)	Generate monthly summary

9. Limitations

1. **Project Work:** Deep work on major projects (research, documentation) may not reflect in message counts
2. **External Communication:** Phone calls and in-person meetings are not tracked
3. **Network Issues:** Discord status may be inaccurate during network problems

These edge cases should be noted by the Team Lead in monthly summaries.

10. Future Enhancements

- Integration with ticketing system (iCare) for task tracking
- Outlook calendar integration for meeting tracking
- Dashboard for real-time monitoring
- Expansion to other teams
